

ORTHOPAEDICS

The orthopaedic multi-disciplinary team is led by specialist consultants for each of the sub-specialities – Spinal, Upper and Lower Limb, Foot and Ankle.

The NWCATS team comprises of surgeons, orthopaedic physicians, extended scope practitioners, allied health professionals (physiotherapy and podiatry) and nurses.

A patient can expect to receive a compassionate and evidence-based approach to their assessment and treatment. Where possible the patient will attend clinic and the diagnosis and treatment will commence on the same day.

Diagnostic scanning will be provided prior to the face to face consultations, where clinically indicated and the results available to the clinicians when they see the patient to help diagnose and treat them.

The clinical pathways that we use fully support a conservative approach to treatment and life style clinics and various options will be discussed with the patient.

If a patient requires surgical intervention we will seamlessly transfer all results and reports to the choice of hospital to avoid duplicating tests and investigations.
